

## Roper Pump Revolutionizes Truck Unloading and Loading with High Flow 3" Pump

**June 1, 2023** – Roper Pump Company, a leading innovator of pumping solutions, is proud to introduce its groundbreaking 3632 pump, the High Flow 3" pump. With its unmatched flow rate and advanced features, the High Flow 3" Pump is designed to provide customers with a faster and more efficient truck unloading and loading experience, setting a new standard in the transportation industry ensuring shorter run times and enhanced productivity.

One of the key advantages of Roper's High Flow 3" pump is its remarkable flow rate, surpassing that of traditional 3" truck-mounted designs. Its output flows 10 gallons per 100 RPM higher than Roper Pump's industry standard 3622 3" design and similar competing pumps. It's also 18GPM higher than the industry standard 3" Vane pump design coupled with a max speed of 900 RPM. This higher flow rate empowers fleet owners and truck drivers to unload and load trucks at an unprecedented speed, significantly reducing overall operation time and boosting productivity.

In addition to its impressive flow rate, Roper's 3632 pump offers multiple installation orientations, allowing for easier installation and flexible rotation. This flexibility enables seamless integration into various truck configurations, ensuring a hassle-free setup process and adaptability to meet diverse operations requirements.

The 3632 pump incorporates Roper's helical gear technology, featuring a stronger tooth profile that guarantees exceptional durability and performance. This innovative gear technology not only enhances the pump's longevity but also ensures quiet operation, minimizing noise levels.

With a compact and lightweight design, the 3632 pump offers easier maintenance and installation compared to bulkier alternatives. Its streamlined construction simplifies the servicing process, enabling quicker maintenance turnaround times and reducing operational downtime.

Roper's 3632 pump boasts a 900 RPM pump rating, further highlighting its superior performance capabilities. This rating underscores the pump's ability to handle demanding tasks while maintaining exceptional reliability, making it an ideal choice for industries requiring fast and efficient truck unloading and loading processes.

"We are thrilled to introduce the High Flow 3" (3632) pump to the market, offering an unparalleled solution for our customers' truck unloading and loading needs," said

Dan Johnston, Vice President of Sales and Marketing at Roper Pump.

"With its exceptional flow rate, versatile installation options, advanced helical gear technology, compact design, and impressive pump rating, the High Flow 3" Pump sets a new industry benchmark. It can do it all, faster, with the same reliability you've come to know and trust from Roper Pump."

#### About Roper Pump Company

Roper Pump Company is a leading provider of innovative pumping solutions. With over 165 years of experience, Roper Pump has established itself as a trusted partner to industries around the world, including transportation, oil and gas, chemical, brewing, and other industrial markets.
